

# Inconvenient Falsehoods

*In Support of Global Taxation  
and Rationing of Energy*

Arthur B. Robinson  
*Oregon Institute of  
Science and Medicine*

The end  
is near!

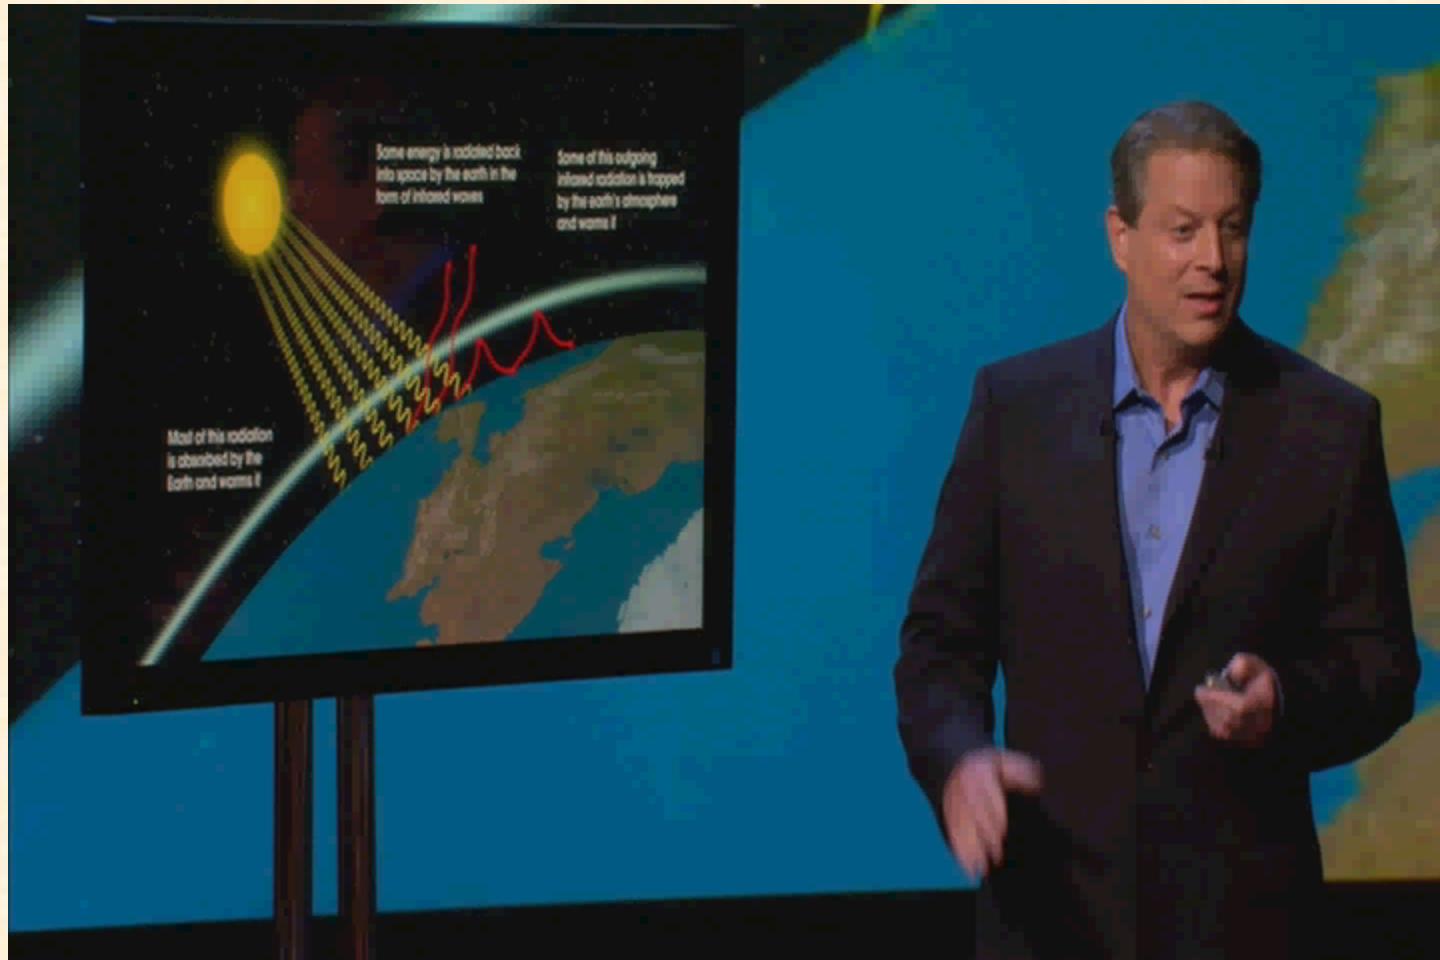

The end  
is here!

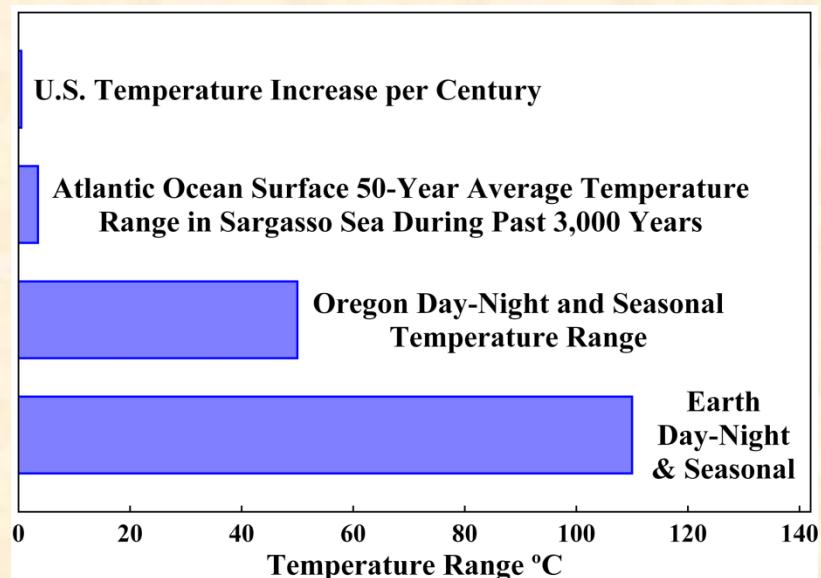

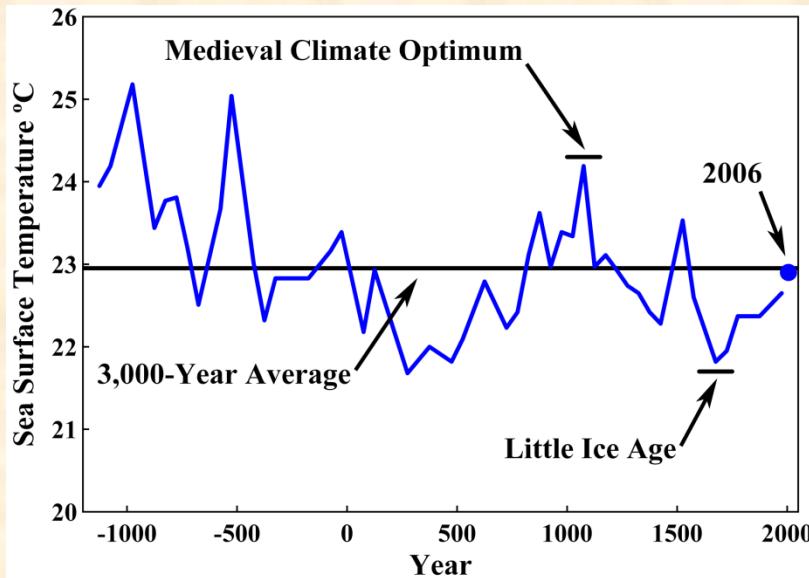

In 1997

In 2007

**Al Gore and his Hollywood, IPCC United Nations,  
and Media retainers.**

# Al Gore's Explanation to Children of Global Warming

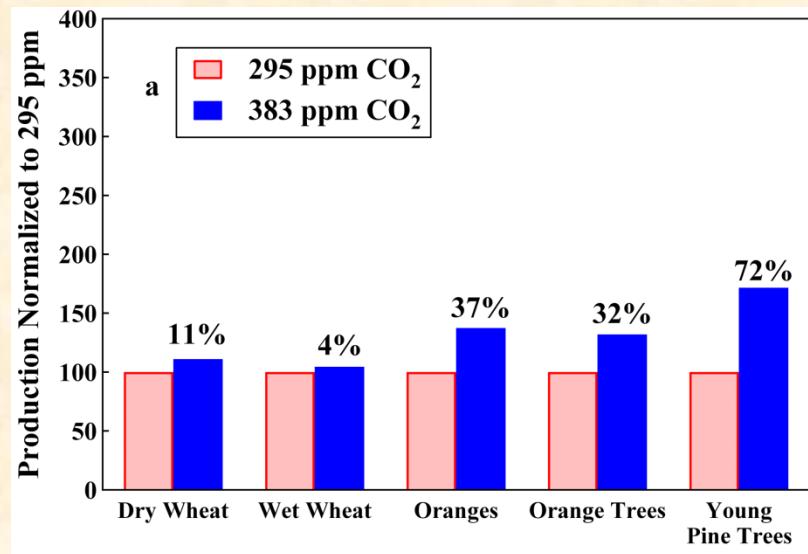

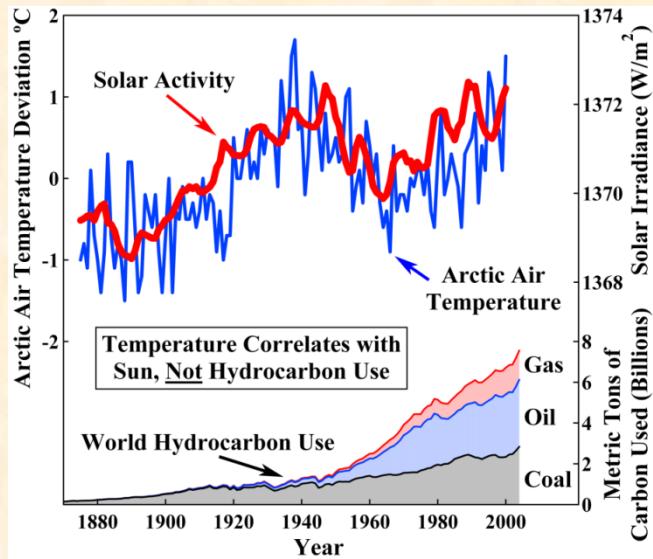

The temperature change during the entire past 3,000 years would have essentially no effect on the melting rate of Susie's ice cream cone. Average United States temperature changed 0.5 degrees C during the past century – 1% of the ordinary range in Oregon.

# Al Gore's Explanation to Children of Global Warming

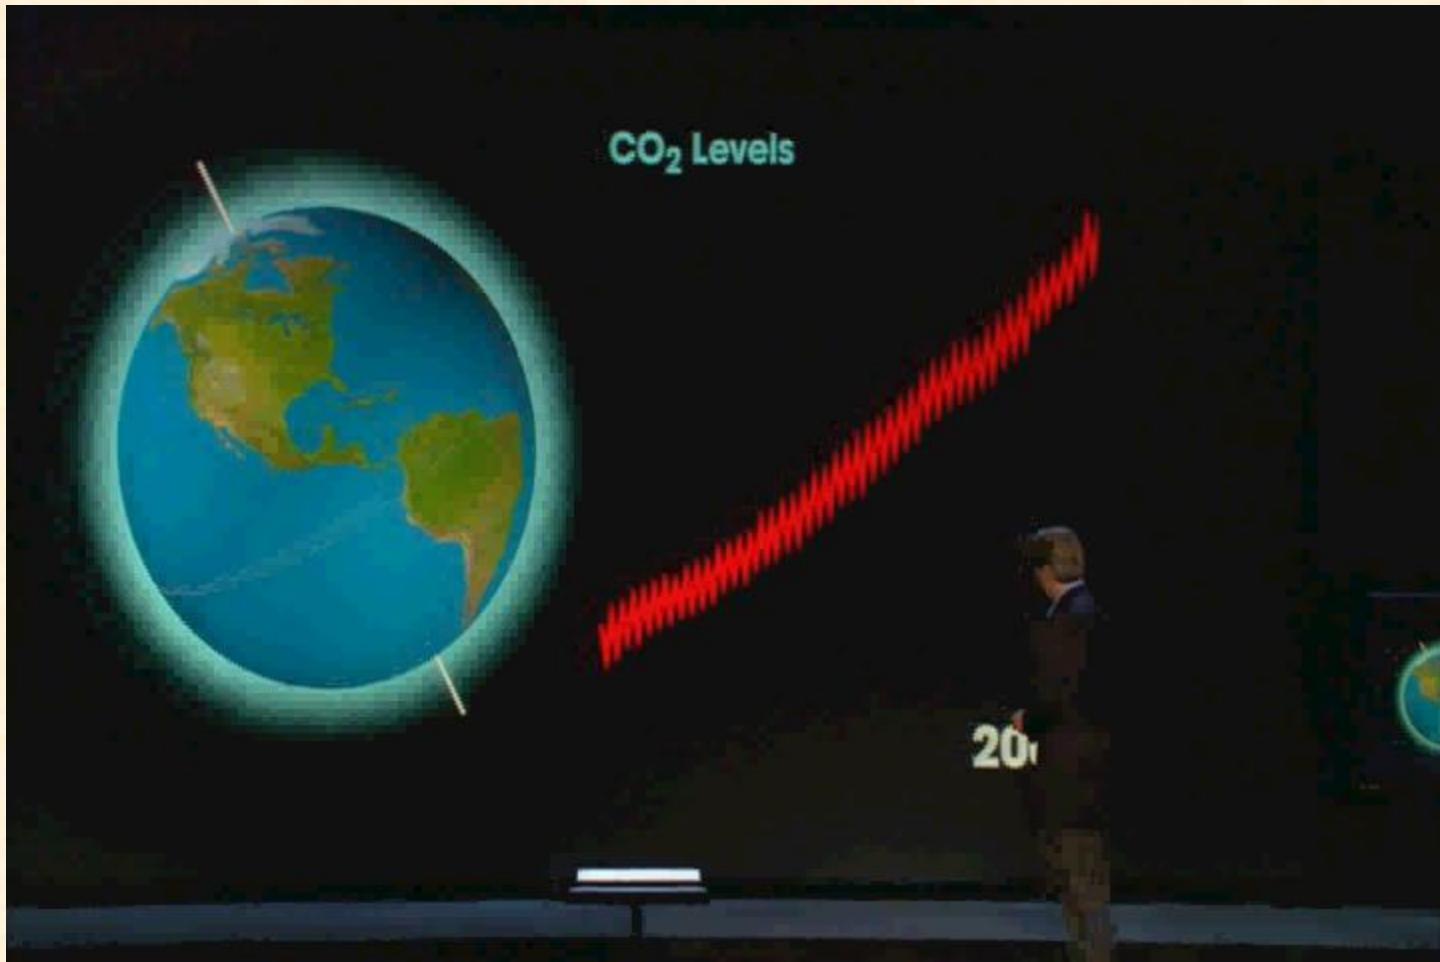

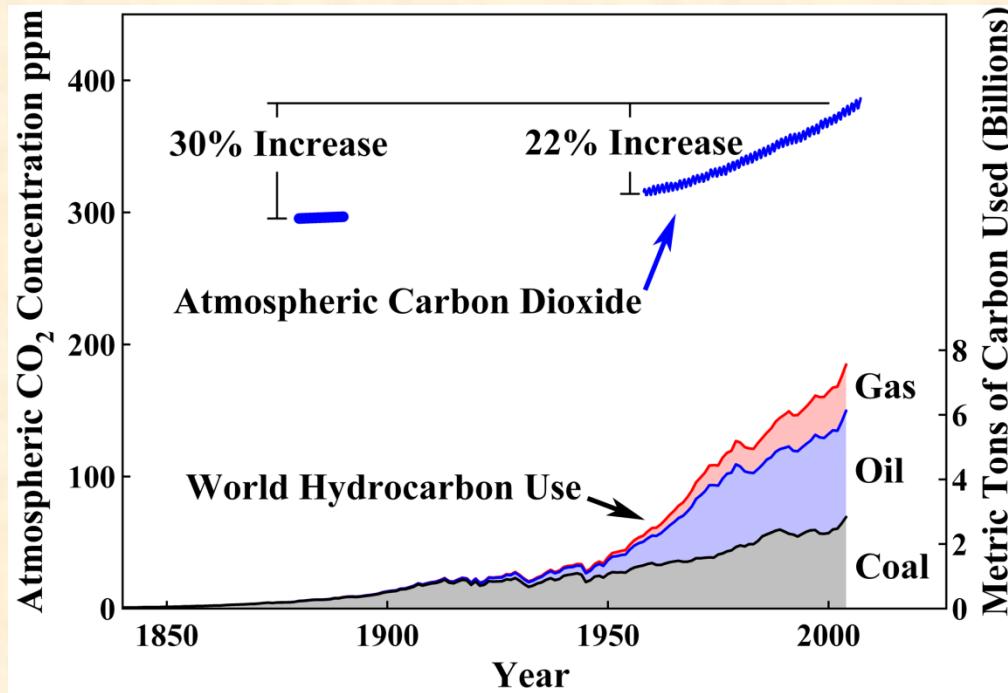

$\text{H}_2\text{O}$  and  $\text{CO}_2$  molecules **do not** kill sunbeams. They also do not steal boxes of money. However, as Al Gore neglects to mention to the children, they **do** provide the carbon and much of the oxygen and hydrogen for every protein, fat, and carbohydrate molecule in Susie and the ingredients in her ice cream cone.

Without atmospheric  $\text{H}_2\text{O}$  and  $\text{CO}_2$  molecules, shown here as evil demons, life on earth would not be possible.

**Al Gore's CO<sub>2</sub> curve has no axis, but implies  
that CO<sub>2</sub> has risen from a very low value**

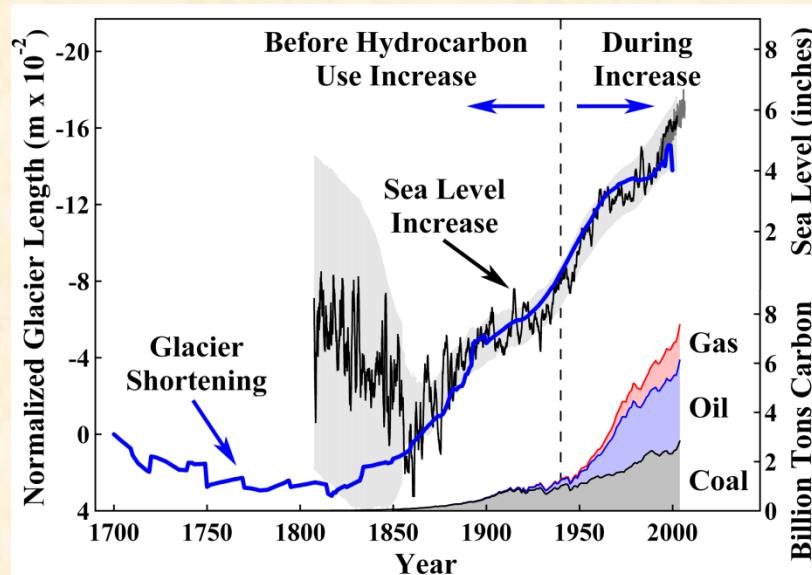

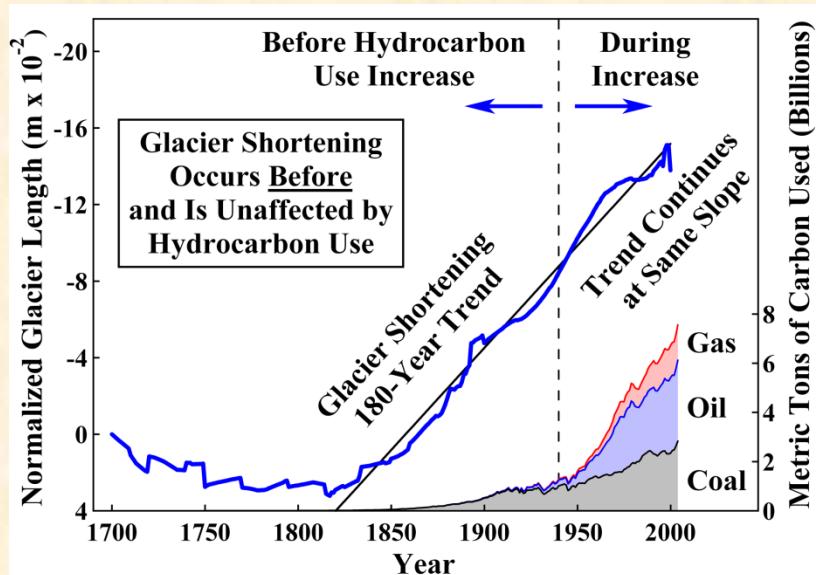

**Atmospheric carbon dioxide has increased by 22% since accurate measurements began in 1958. The air in ordinary human offices is typically more than 1,000 ppm.**

# **Al Gore blames the retreat of Glaciers on human-caused global warming**

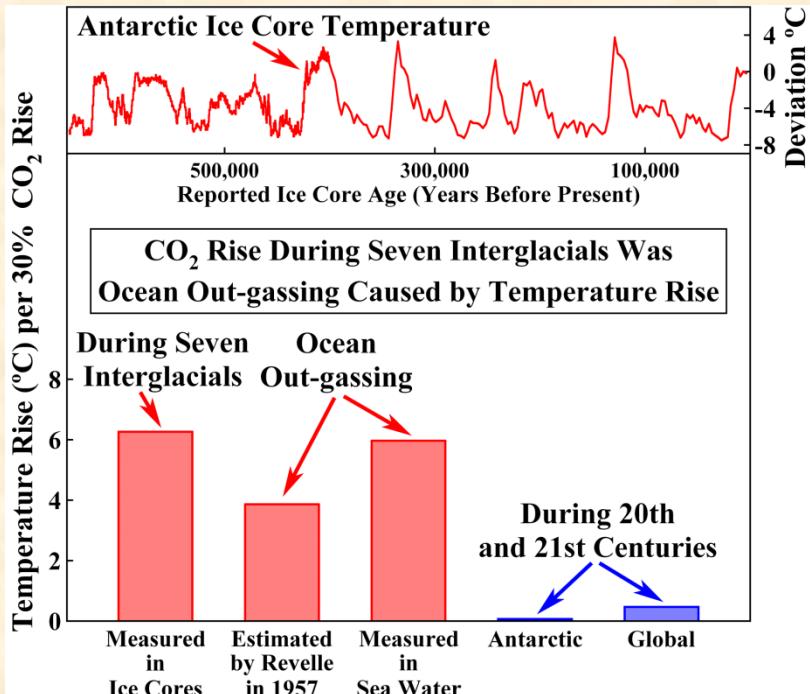

Al Gore begins this glacier discussion in 1980, and uses **short time periods** in all of his glacier examples. In fact, world glaciers have been retreating for 200 years. This **glacier retreat** reflects a rising temperature trend beginning in 1800, which has been **entirely unaffected by human hydrocarbon use**. Glaciers lengthen and shorten cyclically as the earth cools and warms.

**Al Gore states that his strongest evidence is a  
CO<sub>2</sub> – temperature correlation during the past  
650,000 years**

Rising temperature raises the vapor pressure of CO<sub>2</sub> over the oceans, increasing atmospheric CO<sub>2</sub>. This accounts quantitatively for all CO<sub>2</sub> rises during the interglacial periods of the past 650,000 years. Also, careful analysis shows that the CO<sub>2</sub> rise and fall generally **lags** the temperature.

Al Gore claims that CO<sub>2</sub> fluctuations from an unknown source caused the ice ages and the interglacials. In fact, **the temperature changes caused the changes in CO<sub>2</sub> - not the opposite**, as Al Gore claims.

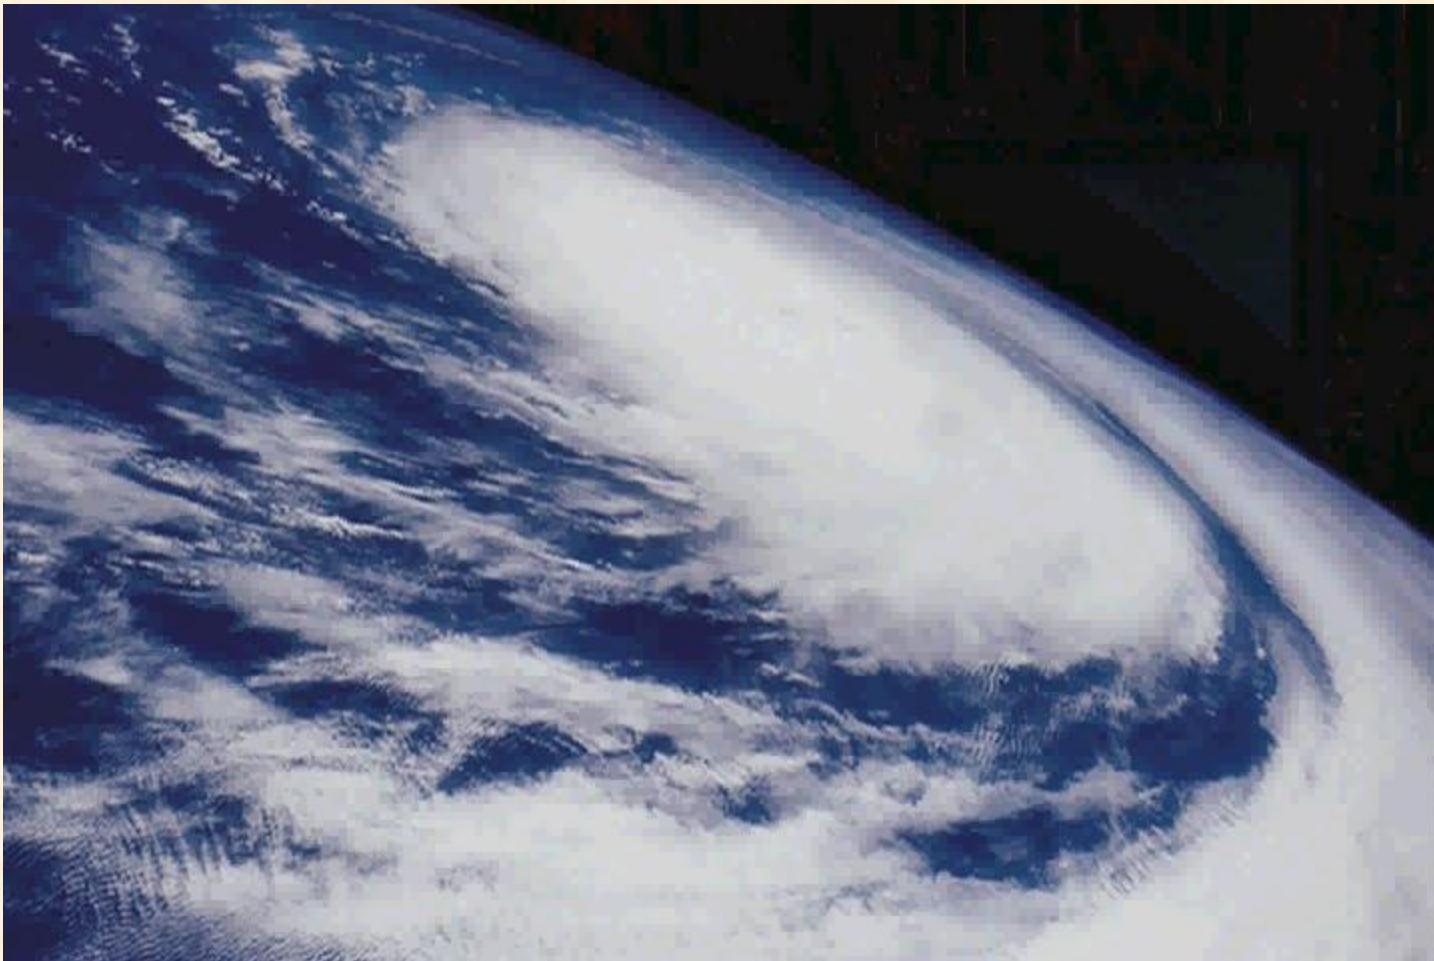

# “Predicting” Earth Temperatures

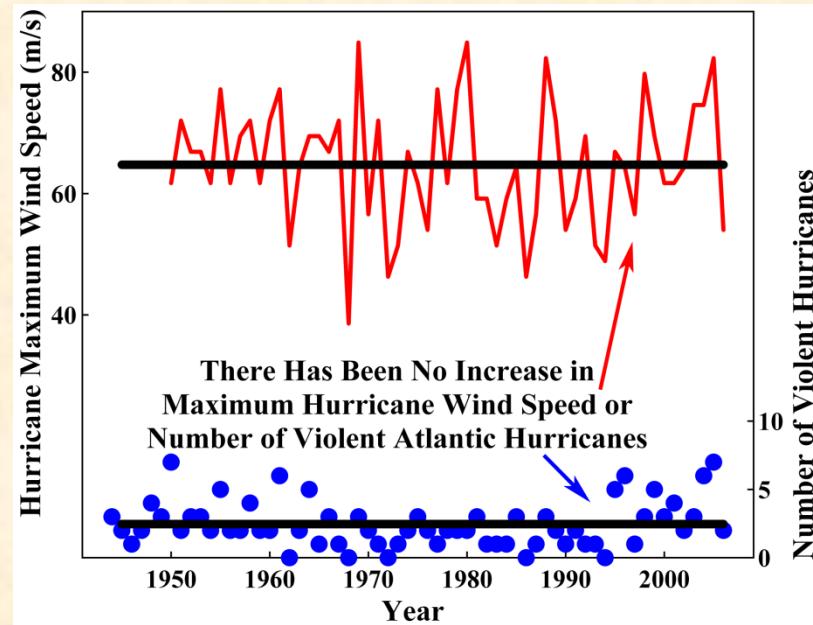

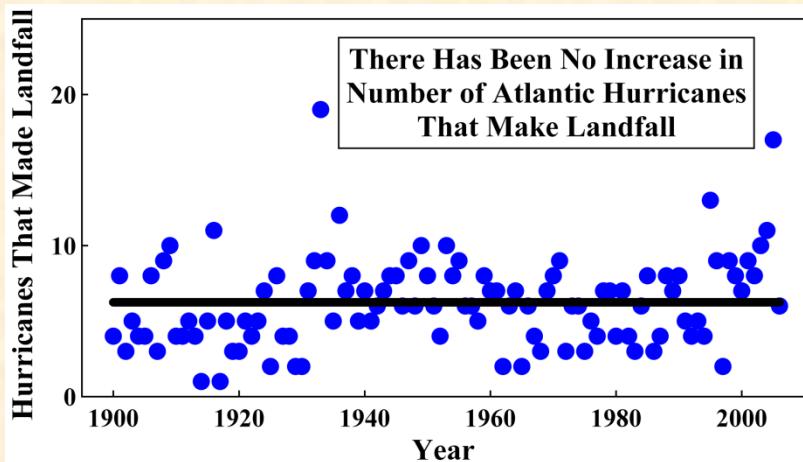

There are **no** such “computer models that long ago predicted” these temperature trends, as Al Gore claims. The computer models were fitted, with 6 or 7 adjustable parameters, **retroactively** to the temperature record. Notice also that **Al Gore’s alleged computer model predictions begin before 1940, when computers did not exist.**

Moreover, none of the models include short-term fluctuations of less than 0.01 degrees C. These fluctuations **have been graphically added** to the “predicted” curves to make them look authentic.

# **Al Gore Blames recent Hurricanes on Human Hydrocarbon Use**

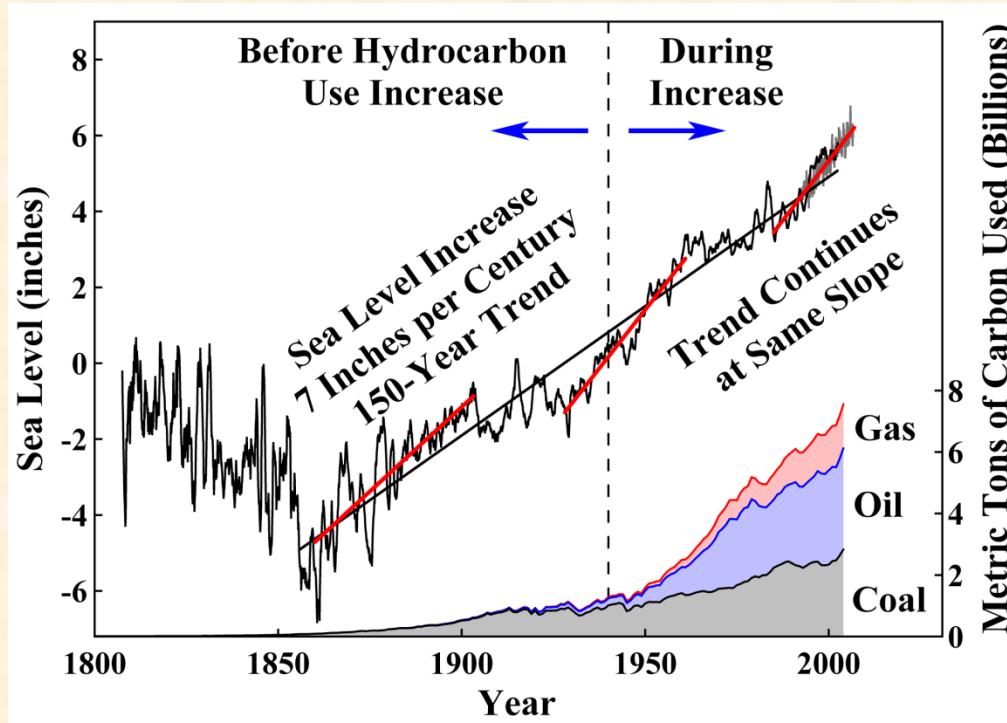

**Neither the frequency nor the intensity of Atlantic hurricanes has increased. Assertions that hurricanes are increasing as a result of human hydrocarbon use are entirely false.**

**“Many residents of low-lying Pacific Island nations have already had to evacuate their homes because of rising seas.”**

**Al Gore, *An Inconvenient Truth***

Sea level has increased gradually and steadily at a rate of **7 inches per century** for 150 years. This change cannot be causing the evacuation of flooded islands as Al Gore asserts.

**In the past 50 years, sea level increased 3 inches.**

In addition:

**Al Gore claims that insect borne diseases are on the rise** because of global warming, but, as Mary Ellen Tiffany Gilder has pointed out, only 4 of the 15 diseases Gore lists are spread by insects. The most serious example, malaria, is returning to areas from which it was previously eradicated because of the ban of DDT use – another cause championed by Mr. Gore. More than 40 million children and pregnant women have died unnecessarily from DDT-preventable malaria in Africa and Asia since the ban of DDT.

**Al Gore claims that Lake Chad in North Africa has dried up as a result of human use of hydrocarbon energy.** However, as Miss Gilder has also pointed out, Lake Chad has dried up four times previously in recorded history and the current drying is known to be the result of local causes.

Moreover:

**Al Gore claims that bark beetles are destroying American forests because of global warming**, but, bark beetle infestations are enhanced by decreased rainfall, while rainfall is actually increasing. Bark beetles cannot be enhanced significantly by a 0.5 degree Centigrade per century increase in temperature.

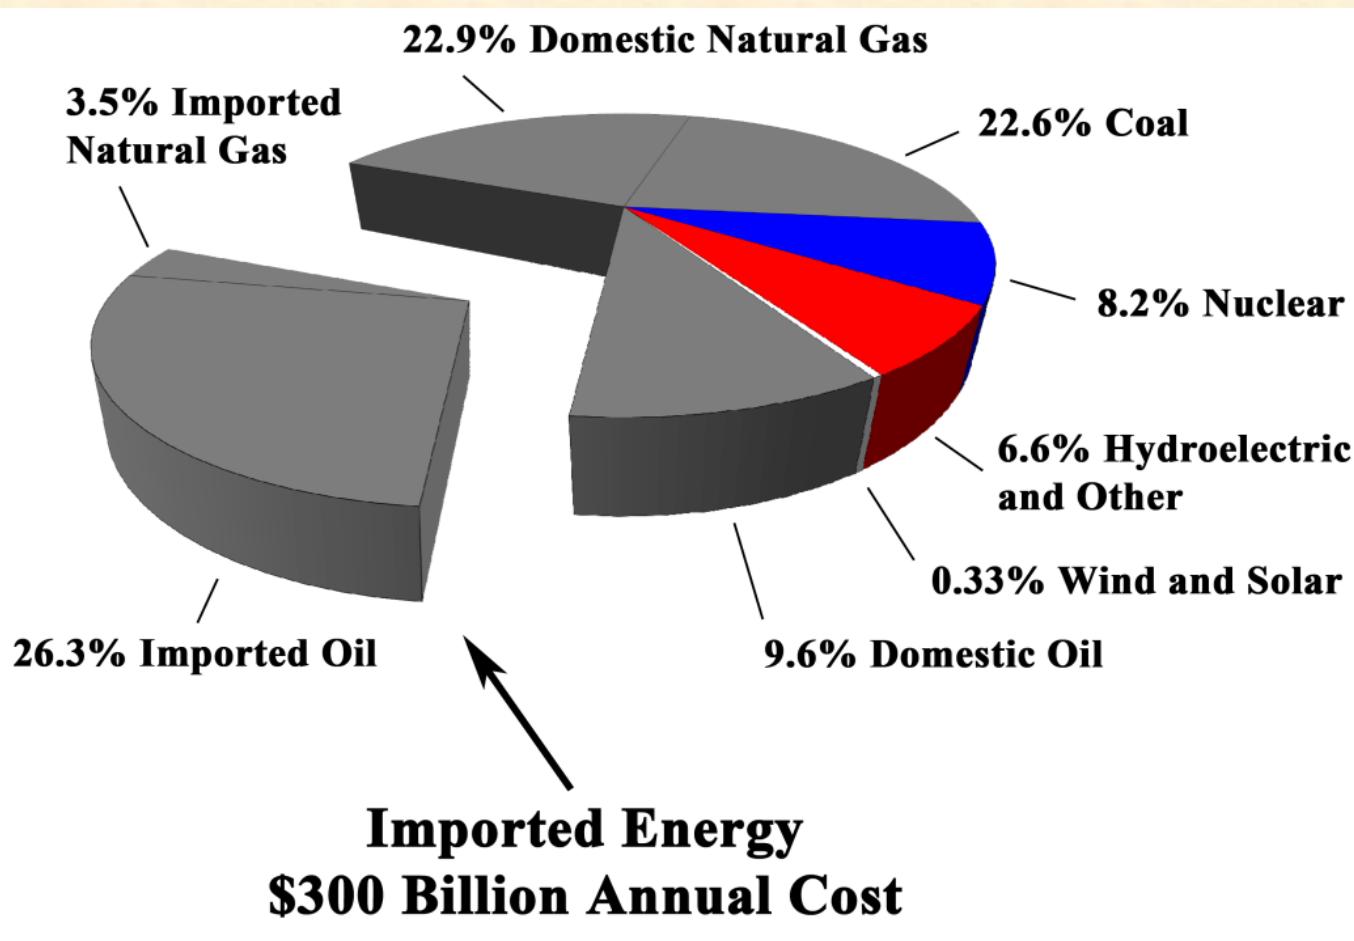

**Al Gore claims that New York, Florida, and San Francisco will be catastrophically flooded by rising seas due to human-caused global warming**. There is not a shred of scientific evidence to support this claim.

Finally, Al Gore and his Hollywood, IPCC United Nations, and Media retainers claim that an overwhelming “consensus” of scientists agree with his statements, and only a handful of “skeptics” disagree. Yet, **more than 20,000 Americans with university degrees in physical science** – including many of our most eminent scientists – **have signed a petition that reads:**

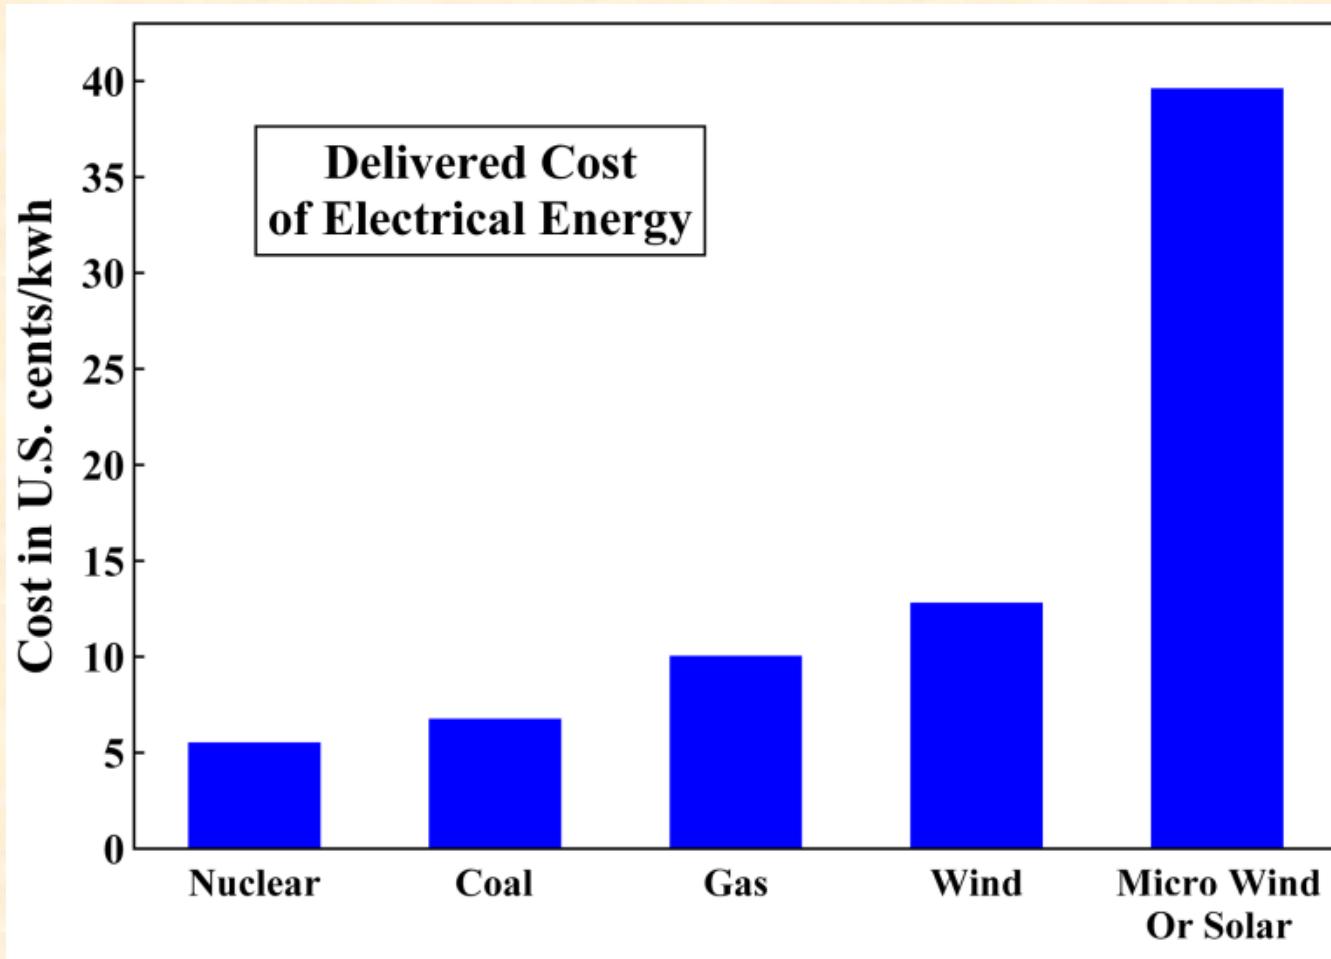

We urge the United States government to reject the global warming agreement that was written in Kyoto, Japan in December, 1997, and any other similar proposals. The proposed limits on greenhouse gases would harm the environment, hinder the advance of science and technology, and damage the health and welfare of mankind.

There is no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gases is causing or will, in the foreseeable future, cause catastrophic heating of the Earth's atmosphere and disruption of the Earth's climate. Moreover, there is substantial scientific evidence that increases in atmospheric carbon dioxide produce many beneficial effects upon the natural plant and animal environments of the Earth.

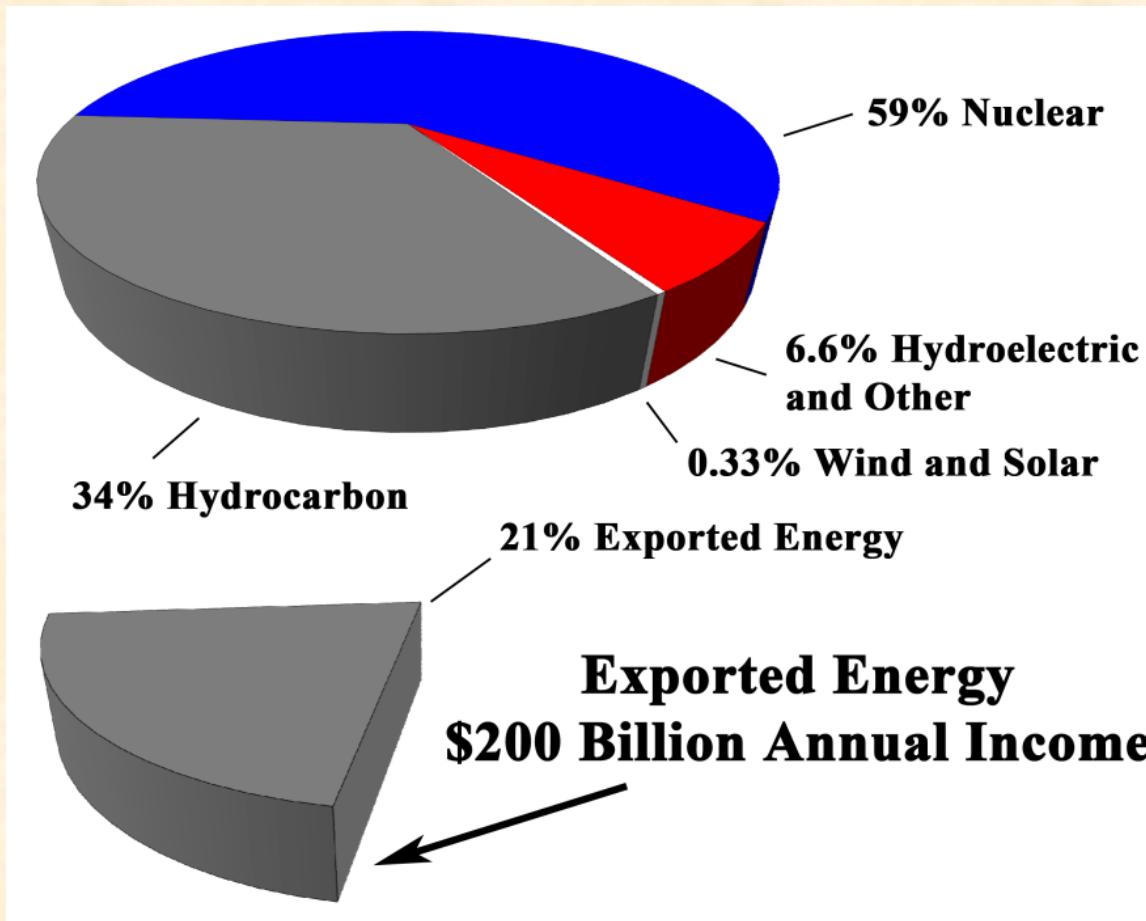

# United States Net Import of Energy costs \$300 billion per Year

# Nuclear and Hydrocarbon Energy are the Least Expensive

# One Palo Verde Nuclear Installation in Each State Results in \$200 Billion Net Export of Energy

**The truth is that essentially all of Al Gore's “inconvenient truths” are false.**

**Al Gore is correct that the current debate on “human-caused global warming” involves an “Assault on Reason” – by him.**

**Hydrocarbon energy is not warming the Earth, but it is markedly increasing the amounts of plants and animals and their diversity.**

**There is a rapidly growing backlash in the scientific community against a group of “atmospheric science” specialists who have severely departed from the scientific method in order to support a United Nations political agenda.**

**This backlash by tens of thousands of American scientists, includes a large percentage of atmospheric scientists and many thousands (more than 20,000 to date) of physical scientists who have become signatories to the following petition:**

We urge the United States government to reject the global warming agreement that was written in Kyoto, Japan in December, 1997, and any other similar proposals. The proposed limits on greenhouse gases would harm the environment, hinder the advance of science and technology, and damage the health and welfare of mankind.

There is no convincing scientific evidence that human release of carbon dioxide, methane, or other greenhouse gases is causing or will, in the foreseeable future, cause catastrophic heating of the Earth's atmosphere and disruption of the Earth's climate. Moreover, there is substantial scientific evidence that increases in atmospheric carbon dioxide produce many beneficial effects upon the natural plant and animal environments of the Earth.
