Cruces Atmospheric Sciences Forum

23 August 2022

Introduction:

I joined the Air Force in 1963 during the time when young men were required to join the Armed Services. I was a recent Rutgers Geology graduate, but in those days, there were no jobs for Geology grads especially those with a “service obligation,” as it was called at the time.

I was lucky enough to become a Weather Officer, and we were sent to school for an intense year as Meteorology undergraduate students; I went to Texas A&M, 1963-64.

I liked being a Weather Officer and applied for the Air Force to send me to Grad School; they sent me to Penn State.

It was there that I first heard of Richard Lindzen, in a class being taught by the late Hans Panofsky, who described Lindzen as “the brightest Meteorologist in the USA, teaching at MIT.”

Appeal to Authority? I think not. Lindzen’s bio shows his brilliance.

The quote below is part of a presentation given at the 2022 annual meeting of Doctors for Disaster Preparedness in Las Vegas given by Dr Willie Soon.

You may watch Willie’s presentation at this link: [Failed Climate Predictions – Willie Soon, PhD – Watts Up With That?](#)

**“What historians will definitely wonder about in future centuries is how deeply flawed logic, obscured by shrewd and unrelenting propaganda, actually enabled a coalition of powerful special interests to convince nearly everyone in the world that CO2 from human industry was a dangerous, planet-destroying toxin. It will be remembered as the greatest mass delusion in the history of the world - that CO2, the life of plants, was considered for a time to be a deadly poison.”**
