

Links and images to climate stories in the news 3d week of August 2023, an intro to the main topic, a working draft, showing the **insanity of the climate alarmists**. There are three graphic sets here. This one, climate stories in the news, one on climate insanity for scientists and those with a science background, and the third, The Top Dozen Graphics Showing the Insanity of Global Warming Alarmist Ideas, for lay persons.

Image right shows that although there is a slight decrease in Antarctic Ice area in February, the data show the September Ice Extent is increasing at 0.4%/decade.

On the absurdities of "personal heat tolerance."

Linda I

You might've seen recent headlines about saguaro cacti keeling over in Arizona after spending nearly a month above 110 degrees Fahrenheit. Not even a week later, *The Washington Post* ran this absurd story: "Your body can build up tolerance to heat. Here's how." I'm not linking to it.

The Red Arrows point to very healthy Saguaro Cactus growing in Maricopa County, AZ., and are in the image which purports to say that warm and hot temperatures in Summer 2023 are not killing the Saguaro Cactus.

The heat this week did NOT cause the ~100 year-old Saguaro to die; it was near the end of its lifespan.

Green Energy Disaster: Hawaiian Electric Blamed for Fires After Concentrating on Green Energy Projects Rather than Safety of Existing Infrastructure

The fires in Maui were not caused by climate change and could have been prevented.
